

## Leawood Pediatrics Vaccine Philosophy and Policy

Leawood Pediatrics is dedicated to providing our patients and their families with the best possible preventative and acute medical care. We are committed to practicing medicine in compliance with evidenced based practices established by national advisory organizations including The American Academy of Pediatrics, The Center of Disease Control, and the American Council on Immunization practices.

To ensure the safety of our staff and patient families, we require all patients to be up-to-date on vaccines required for Kansas school and child care entry according to the schedule outlined by the Centers of Disease Control and Prevention. This link reviews those requirements.
